</tbody>
</table>

are in conformity with the provisions of the Council Directives:

**Machine Directive** 98/37/EC, and comply with the essential requirements of said Directive and the harmonised standards:

- UNE-EN ISO 12100-1/2:2003
- UNE-EN 1050:1996
- UNE-EN 294/A1/AC:1993
- UNE-EN 953:1997

In conformity with **Regulation (CE) No. 1935/2004** on materials and objects intended to come into contact with foodstuffs (repealing 89/109/EEC), in accordance with which the materials in contact with the product do not transfer its constituents to the foodstuffs in quantities large enough to put human health at risk.

**Declaration of Incorporation** (Directive 98/37/EC, annex II, part B):

The aforementioned equipment shall not be commissioned until the machine in which they will be incorporated has been declared as being in conformity with the Machine Directive.

Banyoles, march 2008

Josep Mª Benet
Technical manager
1. Safety

1.1. INSTRUCTIONS MANUAL
This manual contains information about the receipt, installation, operation, assembly, disassembly and maintenance of the CPG agitators.
The information published in the instruction manual is based on updated information.
INOXPA reserves the right to modify this instruction manual without prior notice.

1.2. START-UP INSTRUCTIONS
This instruction manual contains vital and useful information to appropriately handle and maintain your agitator.
Read these instructions carefully before starting up the agitator; become familiar with the operation and use of your agitator and follow the instructions closely. These instructions should be kept in a safe location near the installation.

1.3. SAFETY

1.3.1. Warning symbols

- Danger for persons in general: Danger of injury caused by rotating equipment parts.
- Electrical danger: Danger! Caustic or corrosive agents.
- Danger! Suspended loads: Danger to the correct operation of the equipment.
- Commitment to safety at the workplace: Protective goggles requirement.

1.4. GENERAL SAFETY INSTRUCTIONS

Read this instruction manual carefully before installing and starting the agitator. Contact INOXPA in case of doubt.

1.4.1. During installation

- The Technical Specifications of Chapter 8 should always be observed.
- Check that the agitator anchoring is correct and that the shaft is perfectly aligned. Otherwise, this may lead to serious mechanical problems in the agitator.
- Check that the motor specifications meet the requirements, especially when working under conditions that involve the risk of explosion.
- During the installation, all the electric work should be carried out by authorised personnel.

1.4.2. During operation

- The Technical Specifications of Chapter 8 should always be observed. Under no circumstances can the limit values specified be exceeded.
- NEVER touch the agitator during operation if it is being used in a hot-liquid tank due to the risk of burns.
The agitator contains moving parts. Never place your fingers inside the agitator while it is in operation.

Remove the agitator before closing the valve.

NEVER spray the electrical motor directly with water. The standard protection for the motor is IP- 55: Protection against dust and sprayed water.

The agitator cannot operate without fluid. Standard agitators are not designed to work during the filling or emptying of tanks.

1.4.3. During maintenance

The Technical Specifications of Chapter 8 should always be observed.

NEVER disassemble the agitator until its temperature has decreased and can be handled safely. Always use appropriate protective clothing while operating the agitator.

Do not leave parts loose on the floor.

ALWAYS disconnect the agitator from the power supply before starting maintenance work. Remove the fuses and disconnect the cables from the motor terminals.

All electrical work should be carried out by authorised personnel.

1.4.4. Compliance with the instructions

Any non-fulfilment of the instructions may result in a risk for the operators, the environment and the machine, and may result in the loss of your right to claim damages. This non-fulfilment may result in the following risks:

- Failure of important functions of the machines/plant,
- Failure of specific maintenance and repair procedures,
- Possibility of electric, mechanical and chemical risks,
- Will place the environment in danger due to the release of substances.

1.4.5. Guarantee

Any warranty provided shall immediately be cancelled and void ipso jure, and INOXPA shall be compensated for any product liability claim from third parties, if:

- the service and maintenance work was not carried out in accordance with the service instructions, or the repair work has not been carried out by our personnel or it has been conducted without our written authorization;
- our equipment has been changed without prior written authorization;
- the parts or lubricants used are not original INOXPA parts and products;
- the materials were used incorrectly or negligently, or not in accordance with these instructions and their intended use;
- agitator parts were damaged by excessive pressure owing to the lack of a safety valve.

The General Delivery Terms already provided also apply.

No change can be made to the equipment without prior discussion with the manufacturer. For your safety, please use original spare parts and accessories.

The use of other parts will exempt the manufacturer from any liability.

The service terms can only be changed with prior written authorisation from INOXPA.

Please do not hesitate to contact us in case of doubts or if more complete explanations are required on specific data (adjustments, assembly, disassembly, etc.).

3. General Information

3.1. DESCRIPTION

CPG-series winery agitators are bottom side agitators. They are designed so that they can be installed and disassembled while the tank is full of fluid, it is inserted through a valve without losing pressure and without using tools or special implements. This design is based on the sliding agitation shaft and folding propeller that opens automatically when started up. Sealing is achieved using a mechanical seal.

All the parts into contact with the fluid are manufactured in stainless steel, AISI-304 (1.4301). The surface finish is electropolished. The standard agitation element is a type-12 folding propeller.

This equipment is suitable for use in food-processing.

3.2. RANGE OF APPLICATION

The CPG agitator main field of application is in the wine industry in general, maintaining solids in suspension, mixing wines (blending), gasification (SO₂ and CO₂), temperature homogenisation, syrup distribution, etc. The maximum tank volume for this agitator is 100,000 litres with a viscosity of 1 to 100 cPs (depending on the characteristics of the fluid).

Each agitator has performance limits. The agitator was selected for a given set of agitation conditions when the order was placed. INOXPA shall not be liable for any damage resulting from the incompleteness of the information provided by the purchaser (nature of the fluid, viscosity, RPM, etc.).
4. Installation

4.1. RECEIVING THE AGITATOR

INOXPA cannot be held responsible for the damage sustained by the equipment during transport or unpacking. Visually check that the packaging is not damaged.

The agitator will be accompanied by the following documents:
- Dispatch notes.
- Agitator Instructions and Service Manual.

Unpack the agitator and check:

- The agitator anchor connection, removing any remaining packaging materials.
- Check that the agitator and the motor have not suffered any damage.
- If the equipment is not in good condition and/or any part is missing, the carrier should draw up a report accordingly as soon as possible.

4.1.1. Identifying the agitator

Agitator identification plate

<table>
<thead>
<tr>
<th>TIPO</th>
<th>N°</th>
<th>kw</th>
<th>min⁻¹</th>
<th>V</th>
<th>Hz</th>
<th>QM3/h</th>
<th>Hm</th>
<th>IMPELLER</th>
</tr>
</thead>
</table>

4.2. TRANSPORT AND STORAGE

CPG agitators are often too heavy to be handled and stored manually.

Do not handle the agitator by the shaft as it may become deformed.

- Lift the agitator at the points indicated on the drawing.
- Secure the supports so that they can not slip.
4.3. LOCATION

Once the agitator location has been determined, it must be fixed to the tank using the nut found on the discharge pipe and firmly tightening it with the appropriate spanner. Take into account that when fitting the agitator, to prevent any deformation the agitation shaft must not be struck or forced.

- Install the agitator so as to allow sufficient ventilation.
- If the agitator is installed outdoors, it should be protected by a roof. Its location should enable easy access for any inspection or maintenance operations.

- Force must never be applied on the end of the agitation shaft, since it can easily acquire a permanent deformation.

- The CPG-330 agitator must always be fixed by a support when mounted on the tank.

4.4. ELECTRICAL INSTALLATION

- The connection of the electrical motors must be performed by qualified personnel.
- Take all necessary measures to prevent damage to connections and cables.

- The electrical equipment, terminals and components of the control systems may still contain electric current when switched off. Contact with them may be dangerous for operators or cause irreversible damage to the equipment.

- Before handling the agitator, make sure that the engine is fully disconnected from the power.

- Connect up the motor following the manufacturer’s instructions.
- Check the direction of rotation (see the label on the agitator).

Start up the agitator motor briefly. Ensure that the direction is consistent with the one indicated on the plate. If the agitator operates in the wrong direction, the folding propeller may fall into the tank.

- ALWAYS check the direction of rotation of the motor with fluid inside the agitator.
• The agitator is supplied with a connection ready for operation at 400 V (left photo). If the client has a 230 V, it should change the connection as indicated in the photo on the right.

380 – 480V

220-280V
5. Start-up

Before starting the agitator, carefully read the instructions provided in Chapter 4. Installation.

5.1. START-UP

Read Chapter 8 Technical Specification carefully. I NOXPA cannot be held responsible for the incorrect use of the equipment.

NEVER touch the agitator when working with high-temperature liquids.

5.1.1. Checks before starting up the agitator

- Check that the agitator shaft is aligned and that it slides smoothly through the hollow shaft.
- Check the level of fluid in the tank. When not specified in the order, the agitator cannot be operated during the filling or emptying of the tank.
- Open the valve where the agitator is fixed.
- Introduce the shaft into the tank.
- Remove any air in the mechanical seal area by opening the drainage ports of the housing until liquid comes out.

The agitator must never operate when dry, as this may lead to serious damage to the mechanical seal.

- Check that the power supply matches the rating indicated on the engine plate.
- Check that the motor’s direction of rotation is correct.

5.1.2. Checks when starting up the agitator

- Check that the agitator is not making any unusual noises.
- Check that there are no leaks through the sealed areas.

Introducing an object or solid raw material may cause the agitation component and other mechanical parts to break and compromise its safety or guarantee.

Check the motor’s power consumption to avoid electric overload.

Remove the agitator shaft before closing the valve, as indicated on the sticker found on the agitator.

Once the agitator is operational, take precautions to ensure that you do not put your hand on the back of the agitator, inside the motor hood, because it contains rotating parts that may cause serious personal injury.
6. Operating Problems

The following table provides solutions to problems that might arise during agitator operation. The agitator is assumed to have been properly installed and correctly selected for the application. Please contact INOXPA if technical assistance is required.

<table>
<thead>

<td>Replace the O-ring.</td>
</tr>
</tbody>
</table>

If the problems persist, stop using the agitator immediately. Contact the agitator manufacturer or their representative.
7. Maintenance

7.1. GENERAL INFORMATION
Like any other machine, this agitator requires maintenance. The instructions contained in this manual cover the identification and replacement of spare parts. The instructions have been prepared for maintenance personnel and for those responsible for the supply of spare parts.

Please carefully read Chapter 8 *Technical Specification*.

All replaced material should be duly eliminated/recycled according to the directives in effect in the area.

ALWAYS disconnect the agitator from the power supply before undertaking maintenance work.

7.1.1. Checking the mechanical seal
Regularly check that there are no leaks at the front of the motor. If there are leaks through the mechanical seal, replace it following the instructions given under the Assembly and Disassembly section.

7.2. STORAGE
The agitator must be completely emptied of fluid before storage. If possible, avoid exposing the components of the agitator to excessively damp environments.

7.3. CLEANING

The use of aggressive cleaning products such as caustic soda and nitric acid may cause burns to the skin.

Use rubber gloves during the cleaning process.

Always use protective goggles.

If the agitator is installed in a system with a CIP process, it is not necessary to dismantle the agitator. If there is no automatic cleaning process, dismantle the agitator as indicated in the Assembly and Disassembly section.

**Cleaning solutions for CIP processes.**

Only use clear water (chlorine-free) to mix with the cleaning agents:

a) **Alkaline solution:** 1% by weight of caustic soda (NaOH) at 70ºC (150ºF)

   1 Kg NaOH + 100 l. of water = cleaning solution

   2.2 l. NaOH at 33% + 100 l. of water = cleaning solution

b) **Acid solution:** 0.5% by weight of nitric acid (HNO₃) at 70ºC (150ºF)

   0.7 litres HNO₃ at 53% + 100 l. of water = cleaning

Check the concentration of cleaning solutions; it may cause the deterioration of the watertight seals of the agitator.

To eliminate the remains of cleaning products, ALWAYS carry out a final rinse on completion of the cleaning process.
7.4. DISASSEMBLY / ASSEMBLY OF THE AGITATOR.

Disassembly
Remove the agitator through the valve to which it is fixed by means of the nut (45). Remove the agitator element (02, 02A) by unthreading it from the agitator shaft (05). Remove the shaft (05) behind the motor (93) by sliding it off its hollow shaft. First turn the pin (56A) properly in conjunction with the shaft turner (05A) at the end of the shaft. Remove the discharge pipe with drainage port (01) joined to the motor with screws (51, 52 for CPG-330) and washers (53). Remove the stop ring (17) after taking out the Allen pins (55). Remove the rotary part of the mechanical seal (08). Remove the seal cover (09) along with its O-ring (80A). Remove the fixed part of the mechanical seal (08).

Assembly
Place the O-ring (80A) inside the seal cover (09). Place the stop ring (09) inside the motor flange housing (93). Carefully insert the fixed part of the mechanical seal (08) into its housing inside the seal cover (09). Then, slide the rotary part of the mechanical seal (08) over the motor shaft. Attach the stop ring (17) until it touches the motor shaft, and fasten the Allen pins (55). Insert the agitator shaft (05) through the hollow shaft at the back of the motor. Insert the discharge pipe with drainage port (01) and attach it to the motor with screws (51, 52 for CPG-330) and washers (53). Finally, attach the folding blades (02, 02A) by threading them onto the agitator shaft (05).
