EC DECLARATION OF CONFORMITY

The manufacturer: INOXPA, S.A.
c/ Telers, 57
17820 Banyoles (Girona), Spain

herewith declares that the machine:

**RV helical impeller pump**

with the serial number: ______________

conforms to the relevant provisions of the following directives:

- Low voltage Directive 2006/95/EC

Applicable harmonised Standards:

- UNE-EN ISO 12100:2012

In compliance with Regulation (EC) 1935/2004 relating to materials and articles intended to come into contact with food, the materials in contact with the product do not transfer their constituents to the product in quantities which could endanger human health.

Identification of the person empowered to draw up the Declaration on behalf of the manufacturer, and qualified to compile the technical file established by the Community:

Banyoles, 21 September 2012

[Signature]

David Reyero Brunet
Technical Office Manager
1. Safety

1.1. INSTRUCTION MANUAL
This instruction manual contains information on the reception, installation, operation, fitting, stripping and maintenance for the RV pump.
The information given herein is based on the most up-to-date data available.
INOXPA reserves the right to modify this instructions manual without having to give prior notice.

1.2. START-UP INSTRUCTIONS
This instruction manual contains vital and useful information for properly operating the pump and for keeping it in good running condition.
Not only should the safety instructions set forth in this chapter be carefully read before putting the pump into operation, but those concerned must also familiarise themselves with the operating features of the pump and strictly adhere to the instructions given herein. It is extremely important that these instructions be kept in a set place near the installation.

1.3. SAFETY
1.3.1. Warning signs

- Danger for people in general.
- Danger of injury caused by rotating parts of the equipment.
- Danger! Electricity.
- Danger! Caustic or corrosive agents.
- Danger! Suspended loads.
- Danger to the proper operating of the machine.
- Obligation to ensure safety at work.
- Use of safety goggles obligatory.

1.4. GENERAL INSTRUCTIONS
This equipment is suitable for his use in food process.

Please read the instruction manual carefully before installing and commissioning the pump. Should you have any doubts or queries, contact INOXPA.

1.4.1. During the installation

You must always bear in mind the Technical Specifications set forth in Chapter 8.

Do not put the pump into operation before connecting it to the pipes.

Do not put the pump into operation if the cover of the pump has not been fitted and the impeller fixed in the pump.

Check that the motor specifications are correct, especially if there is a special risk of explosion due to the work conditions.

During the installation procedure, all the electrical work must be carried out by duly authorised personnel.

1.4.2. During operation

You must always bear in mind the Technical Specifications set forth in Chapter 8. The limit values that have been set must NEVER be exceeded.

NEVER touch the pump or pipes whenever the pump is being used to decant hot liquids or during the cleaning procedure.
The pump has moving parts. Do not put your fingers into the pump when it is operating.

NEVER work with the suction and the delivery valves shut off.

NEVER directly sprinkle the electric motor with water. Standard motor protection is IP-55: dust and water sprinkling protection.

1.4.3. During maintenance

You must always bear in mind the Technical Specifications set forth in Chapter 8.

NEVER strip the pump down until the pipes have been drained. Remember that there will always be some liquid left in the pump casing (if it has not been fitted with a drain). Always remember that the liquid that has been pumped may be dangerous or subject to high temperatures. For situations of this type, please consult the prevailing regulations in the country in question.

Do not leave loose parts on the floor.

ALWAYS turn the power supply to the pump off before embarking on maintenance work. Take out the fuses and disconnect the wires from the motor terminals.

All electrical work must be carried out by duly authorised personnel.

1.4.4. In accordance with the instructions

Any failure to comply with the instructions could lead to a hazard for the operators, the atmospheric conditions of the room, and the machine, and it could lead to a loss to any right to make a claim for damages. Such non-compliance could bring with it the following risks:

- Important operating failures of the machine / plant.
- Failure to comply with specific maintenance and repair procedures.
- Potential electrical, mechanical and chemical hazards.
- Atmospheric conditions in the room could be hazardous due to the release of chemical substances.

1.4.5. Warranty

We wish to point out that any warranty issued will be null and void and that we are entitled to an indemnity for any civil liability claim for products which might be filed by third parties if:

- Operation and maintenance work has not been done following the corresponding instructions; the repairs have not been made by our personnel or have been made without our written authorization;
- Modifications are made to our material without prior written authorization;
- The parts or lubricants used are not original INOXPA parts/lubricants;
- The material has been improperly used due to error or negligence or have not been used according to the indications and the intended purpose.
- The parts of the pump have been damaged as a result of having been exposed to strong pressure as there was no safety valve.

The General Delivery Terms which you have already received are also applicable.

No modification can be made to the machine without the prior consent of the manufacturer. For your safety, use spare parts and original accessories. The use of other parts exempts the manufacturer from any and all responsibility.

Any change in operating conditions can only be done with the prior written consent of INOXPA.

In the event of doubt or should you require a fuller explanation on particular data (adjustment, assembly, disassembly...), please do not hesitate to contact us

3. General Information

3.1. DESCRIPTION
RV Helical Impeller pumps are compactly built. They are axial suction and radial discharge pumps, and are fitted with hygienic type connection. The pump casing and impeller are manufactured with investment casting technology. All the parts that come into contact with the product are made of AISI 316L stainless steel.

The RV range is designed for continuous operation. The most significant constructional features of the range are:
- Monobloc pump
- Pump casing with drainage
- Helical type impeller
- Mechanical seal with silicon carbide faces
- B35 motor complying with IEC standards.

3.2. OPERATING PRINCIPLE
Even though the impeller pump is of the helical type, its operating principle is that of a centrifugal pump. The pump is not reversible.

The direction of rotation is clockwise when the pump is viewed from the rear side of the motor.

3.3. APPLICATION
RV pumps bring together a series of characteristics suited to those sectors in which any alteration to the product is forbidden. As a result of the helical profile of the impeller, the pump does not clog up, and what is more, the solid substances in suspension remain undamaged, because this type of impeller accompanies the product to the inside of the pump casing. This characteristic of the RV pump makes it an essential element in many tasks such as pieces of fruit or whole fruits, olives, mushrooms, orange segments, vegetables, fish, etc, which require the preservation of the form of the solids in suspension.

RV pumps are widely in wineries for the pump-over process where the high capacity and minimum destruction of the solid parts (seeds, skins, etc.) is required. The design of the pump contributes to a better extractions of tannin, the colouring matter of wine, in the phase of vinification, reducing the lees formation and, as the result, achieving high quality wines.
4. Installation

4.1. PUMP SELECTION

INOXPA is not responsible for any deterioration of the material as a result of its transportation or unpacking. Visually check that the packing has not suffered any damage.

The pump will be accompanied by the following documentation:
- Dispatch notes.
- Pump Instruction and Service Manual.
- Motor Instruction and Service Manual (*).
- (*) If the pump has been supplied with a motor from INOXPA.

Unpack the pump and check the following:
- The pump suction and delivery connections, removing the remains of any packaging materials.
- Check that the pump and the motor have not suffered any damage.
- If the equipment is not in good condition and/or any part is missing, the carrier should draw up a report accordingly as soon as possible.

4.1.1. Pump identification and marking

![Pump plate]

4.2. TRANSPORT AND STORAGE

RV pumps are quite often too heavy to be put into their storage space manually.

Lift the pump as is shown below:

- Always use two support points placed as far apart as possible.
- Secure the supports so that they will not move.
4.3. LOCATION
- Position the pump as near as possible to the suction tank, and whenever possible below the level of the liquid.
- Place the pump in such a way that there is enough space around it to provide access both to the same and to the motor. (See Chapter 8. Technical Specifications to consult dimensions and weights).
- Place the pump on a level and flat surface.
- The basement must be rigid, horizontal and against any vibration.

![Install the pump in such a way that it can be properly ventilated. If the pump is to be installed outside, it must be done so under cover. Its positioning must enable easy access for any inspection and maintenance operations that may need to be carried out.]

4.4. PIPES
- In general, suction and delivery pipes should be fitted in straight stretches, with the minimum amount of elbows and accessories, in order to reduce, as far as possible, any load loss that might be produced by friction.
- Make sure that the pump mouths are well aligned with respect to the piping, and that they are similar in diameter to that of the pipe connections.
- Position the pump near as possible to the suction tank, and whenever possible below the level of the liquid, or even lower with respect to the tank to enable the static suction head to be at its maximum.
- Place brackets for the piping as near as possible to the suction and delivery mouths of the pump.

4.4.1. Shut-off valves
The pump can be isolated for the purpose of carrying out maintenance work. To this end, shut-off valves should be fitted at the pump's suction and delivery connections. These valves must ALWAYS be open whenever the pump is operating.

4.5. ELECTRICAL INSTALLATION

![Leave the connecting of the electrical motors to qualified personnel. Take the necessary measures to prevent any breakdowns in the connections and wires.]

![The electrical equipment, the terminals and the components of the control systems may still carry an electric charge even when disconnected. Contact with them may put the safety of operators at risk, or cause irreparable damage to the material.]

Before manoeuvring the pump, make sure that the electric box is switched off.

- Connect the motor in accordance with the instructions supplied by the manufacturer of the same.
- Check the direction of the rotation (see the signaling label on the pump).

Check ALWAYS the direction of the motor's rotation with liquid inside the pump.
5. Start-up

Before putting the pump into operation read carefully the instructions on installation given in Chapter 4. Installation.

5.1. START-UP

Read Chapter 8. Technical Specifications carefully. INOXPA will not assume responsibility for any improper or incorrect use of the equipment.

Do not touch the pump or the piping while it is pumping products at a high temperature.

5.1.1. Checks to be carried out before putting the pump into operation

- Completely open the pipes’ suction and delivery shut-off valves.
- If the liquid fails to flow toward the pump, fill it with the liquid to be pumped.

The pump must NEVER rotate without liquid.

- Check that the rotation direction of the motor is correct.
- Check that the electrical supply is according as indication on the motor plate.

5.1.2. Checks to be carried out on putting the pump into operation

- Check to make sure that the pump is not making any strange noises.
- Check to see if the absolute inlet pressure is sufficient, in order to avoid cavitations in the pump. Consult the curve for the minimum required pressure above the steam pressure (NPSHr).
- Monitor the delivery pressure.
- Check that there are no leaks in the sealed areas.

A shut-off valve should not be used in the suction pipe to regulate the flow rate. It must be completely open during operation.

Monitor motor consumption in order to avoid a circuit overload.

Reduce the flow and the power consumed by the motor:

- Regulating the flow to the pump delivery.
- Decreasing motor speed.
## 6. Operating problems

The table given below provides solutions to problems that might arise during pump operation. With respect to the same, it is assumed that the pump has been properly installed and has been correctly selected for the application in question. Should there be a need for technical service please contact INOXPA.

### Operating problems

</table>

### Probable causes

<table>
<thead>
<tr>
<th>Probable causes</th>
<th>Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Wrong direction of rotation</td>
<td>Change the direction of rotation.</td>
</tr>
<tr>
<td>2 NPSH is not high enough</td>
<td>Increase the available NPSH:</td>
</tr>
<tr>
<td></td>
<td>- Place the suction tank higher</td>
</tr>
<tr>
<td></td>
<td>- Place the pump lower</td>
</tr>
<tr>
<td></td>
<td>- Increase the diameter of the suction pipe</td>
</tr>
<tr>
<td></td>
<td>- Shorten and simplify the suction pipe</td>
</tr>
<tr>
<td>3 Pump not drained</td>
<td>Drain or fill</td>
</tr>
<tr>
<td>4 Cavitation</td>
<td>Increase suction pressure (see also 2)</td>
</tr>
<tr>
<td>5 Air is sucked in by the pump.</td>
<td>Check the suction pipe and all its connections</td>
</tr>
<tr>
<td>6 Clogged suction tube</td>
<td>Check the suction pipe</td>
</tr>
<tr>
<td>7 Delivery pressure too high</td>
<td>If necessary, reduce load losses, e.g. by increasing the diameter of the tube</td>
</tr>
<tr>
<td>8 Flow too high</td>
<td>Decrease the flow:</td>
</tr>
<tr>
<td></td>
<td>- Reduce the flow by means of a diaphragm.</td>
</tr>
<tr>
<td></td>
<td>- Partially shut off the delivery valve.</td>
</tr>
<tr>
<td></td>
<td>- Reduce speed.</td>
</tr>
<tr>
<td>9 Fluid viscosity too high</td>
<td>Decrease the viscosity by injecting liquid or increasing the diameter of the piping.</td>
</tr>
<tr>
<td>10 Fluid temperature too high</td>
<td>Reduce the temperature by cooling the fluid.</td>
</tr>
<tr>
<td>11 Mechanical seal damaged or worn</td>
<td>Replace the seal</td>
</tr>
<tr>
<td>12 O-rings unsuitable for the fluid.</td>
<td>Fit suitable O-rings after checking with the supplier.</td>
</tr>
<tr>
<td>13 The impeller scrapes.</td>
<td>- Reduce temperature</td>
</tr>
<tr>
<td></td>
<td>- Reduce suction pressure</td>
</tr>
<tr>
<td>14 Taught tubes</td>
<td>Connect the tubing to the pump avoiding taughtness.</td>
</tr>
<tr>
<td>15 Pump speed too low</td>
<td>Increase speed.</td>
</tr>
<tr>
<td>16 The cut-off valve on the suction side is closed</td>
<td>Check and open</td>
</tr>
<tr>
<td>17 Delivery pressure too low</td>
<td>Increase the pump speed.</td>
</tr>
</tbody>
</table>

⚠️ **If the problems persist stop using the pump immediately. Contact the pump manufacturer or his representative.**
7. Maintenance

7.1. GENERAL MAINTENANCE
This pump, as with any other machine, needs to be maintained. The instructions contained in this manual deal with the identification and replacement of the spare parts. These instructions have been drawn up by maintenance staff and are destined for those people who are responsible for supplying spare parts.

Read carefully Chapter 8. Technical specifications.

All the parts or materials that are changed must be duly eliminated/recycled in accordance with the prevailing directives in each area.

ALWAYS disconnect the pump before starting out on any maintenance work.

7.1.1. Check the mechanical seal
Periodically check that there are no leaks in the shaft area. Should there be any leaks in the mechanical seal area, replace the same pursuant to the instructions given in the section entitled Stripping and Assembly of the pump.

7.2. STORAGE
Before being stored the pump must be completely emptied of liquids. Avoid, as far as possible, the exposure of the parts to excessively damp atmospheres.

7.3. CLEANING
The use of aggressive cleaning products such as caustic soda and nitric acid may give rise to skin burns.

Use rubber gloves during the cleaning process.

Always use protective goggles.

If the pump is installed in a system fitted with a CIP process, there will be no need for stripping.
If it is not fitted with an automatic cleaning process, strip the pump pursuant to the instructions given in the section entitled Stripping and Assembly of the pump.

Cleaning solutions for CIP processes.

Only use clear water (chloride free) to mix with the cleaning agents:

a) Alkaline solution: 1% in weight of caustic soda (NaOH) to 70ºC (150ºF)

1 Kg NaOH + 100 l. water = cleaning solution
or
2.2 l. NaOH al 33% + 100 l. of water = cleaning solution

b) Acid solution: 0.5% in weight of nitric acid (HNO₃) to 70ºC (150ºF)

0.7 liters HNO₃ to 53% + 100 l. water = cleaning solution

Monitor the concentration of cleaning solutions, it could give rise to the deterioration of the pump sealing gaskets.

In order to remove any remains of cleaning products, ALWAYS rinse the element in question with clean water after completing the cleaning process.
7.4. PUMP DISASSEMBLY/ASSEMBLY

7.4.1. Pump casing and impeller

**Disassembly**

Loosen the retention ring nut and remove the retention ring (15) along with the housing (01) and the O-ring (80)
Loosen the impeller (02) allen screw (51) using an allen key
Take out the impeller (02) along with the allen screw (51)

![Pump parts diagram]

**Assembly**

Mount the impeller (02). Fasten it in place using the allen screw (51). Place the O-ring (80)
Assemble the housing (01) using the retention ring (15)

7.4.2. Lantern and mechanical seal

**Disassembly**

Remove the key (61) and take out the rotary part of the mechanical seal (08)
Loosen the 4 hexagonal screws (52) using a fixed wrench
Remove the hexagonal screws (52), the grower washers (53) and remove the lantern (04), the fixed part of the seal, which is housed in the lantern, and remove the splash ring (82).
Assembly

Slide the splash ring (82) over the pump shaft (05) without pushing it to the end.
Fit the lantern (04) and fasten the 4 hexagonal screws (52) and the grower washers (53).
Place the fixed part of the mechanical seal (08) in the lantern (04) taking into account the position of the impeller knob.
Assemble the rotary part of the mechanical seal (08) by entering the seal through the pump shaft.
Check that the mounting dimension "A" is like the detailed (table below). Then tighten the two screws (51A) securing the shaft (05) in accordance with an appropriate torque (see table 8.3.)
Place the key (61), and continue with the assembly of the pumpcasing (01) and the rotor (02) (paragraph 7.4.1.)

<table>
<thead>
<tr>

<td>40.5 ± 0.5</td>
</tr>
<tr>
<td>RV-80</td>
<td>⌀ 30</td>
<td>42.5 ± 0.5</td>
</tr>
</tbody>
</table>

IMPORTANT! When assembling the new seal, be careful and mount the parts and the O-rings with soapy water in order to allow an easy glide of the parts, either the stationary part and the rotary part on the shaft.
8. Technical Specifications
